

Picking the Right Process Improvements

November 19, 2009

Joseph V. Vandeville Associate Technical Fellow Robert M. Tuthill & Robert M. Sabatino Six Sigma Black Belts Northrop Grumman Corporation

- Selecting Processes for improvement what the CMMI[®] says about it
- A general approach what's the problem
- More specific details a solution
- Fitting it Into a Process
- Summary

OPP SP 1.1: <u>Select</u> the processes or subprocesses in the organization's set of standard processes that are to be included in the organization's <u>process-performance analyses</u>.

QPM SP 1.3: <u>Select</u> the subprocesses of the project's defined process that will be <u>statistically managed</u>.

OID SP 1.1: <u>Collect</u> and analyze process- and <u>technology-</u> <u>improvement proposals</u>.

OID SP 1.2: <u>Identify</u> and analyze <u>innovative improvements</u> that could increase the organization's quality and process performance.

CAR SP 1.1: <u>Select</u> the <u>defects</u> and <u>other problems</u> for analysis.

OPF SP 1.3: <u>Identify improvements</u> to the organization's processes and process assets.

Sum of each evaluator's "raw" rating, for each evaluation criterion.

10

Approved for Public Release, Distribution Unlimited: Northrop Grumman Case 09-2070 Dated 10/22/09

Sum of each "raw" rating times it's associated evaluation "weight".

Selecting the Candidates

Which improvement projects would you select if your resources were limited?

Summary

... How do I determine this

You may be able to get more data than you realize!

- Low Risk: stated barriers to success of the process improvement (e.g. data availability, resources, time constraints). 5 represents low risk, 1 is high risk.
- **High Benefits**: relative anticipated return on implemented improvement to process performance. 5 represents high benefit, 1 is low benefit.
- **High Org Impact:** Scope of the organization that benefits (e.g. Site, Division, Sector, future projects) 5 represents high impact, 1 is low impact.
- Business Goal Alignment: supports current business goals directly or indirectly. 5 represents direct alignment, 1 means low alignment
- Voice of Customer (VOC): to what degree does customer perceive the improvement as a benefit. 5 represents high voice of customer, 1 is low voice of customer.
- **High Process Criticality:** to what degree is the process critical to business operations (e.g. high driver as an effort, or high driver on schedule's critical path, or high driver as a critical verification point, or high driver to safety/reliability/availability). 5 signifies the improvement impacts a process of high criticality, and a 1 impacts a process of low criticality.
