Developing Secure & Resilient Next Generation Communications Networks & Services

Prepared for:

Disruptive Technologies Conference

Telcordia Contact:
John Kimmins
Executive Director/Fellow
jkimmins@telcordia.com
732-699-6188
Overview

- Network & Services Transformations
- Security Threats
- Technical & Operations Trends
- Current Security Approaches
- Risk Management Framework
Network Transformation: Market Drivers

Service Providers

Revenue Growth

Operational Cost Savings

Sustainable Value

Better Customer Experience

- New Multi-Media Services
- Service Based Charging
- Rapid Service Creation
- Converged Call Control
- Open, Standards-based Network
- Less Operations Staff
- Access Agnostic (e.g., mobile, fixed, wireless)
- Greater User Control
- Presence & Availability

- Sell Services, not an “IP pipe”
- Services = Value
- Transport = Commodity

- Converged Call Control
- Open, Standards-based Network
- Less Operations Staff
- Access Agnostic (e.g., mobile, fixed, wireless)
- Greater User Control
- Presence & Availability

Better Customer Experience

Sustainable Value

Revenue Growth

Operational Cost Savings

Service Providers
Threats Magnified
Interdependencies & Technology Evolution
Network Transformation: End-to-End Infrastructure Security Risks

Legend
- IT Servers
- Core Network
- Applications
- Access

- Proxy Servers
  - Denial of Service
  - Insecure Software Development Environment

- Third Party Application Access

- Access
  - Worms/Viruses
  - Man-in-the-Middle Attacks

- User Device

- Application Servers
  - Un-patched Operating System

- Control Servers
  - Signaling Weaknesses

- Application
  - Weak Authentication

- Network Attachment
  - Weak Authentication

- Web Servers
  - Inadequate Input Validation

- Back-End Systems
  - Weak App-to-App Authentication

- PSTN
“Take Balad Air Base, for example,” Colonel Fielden said. "A passing ship anchor cut an undersea fiber optic cable and Balad went from conducting hundreds of combat sorties per day to conducting tens of sorties a day. What do you do when communications systems are down? Not much of anything.”

How do you address reduce risk?
Next Generation Network (NGN) Deployments

How is Security today?

- **Basic**
  - Baseline security requirements for product vendors are vague
  - Organizational issues are not fully identified and addressed

- **Not mature**
  - Security performance and reliability are critical elements and need to be improved
  - Signaling and media security are not fully recognized by the market
  - Integration of security functionality still evolving

- **Poorly planned and implemented**
  - Implementations inherit traditional vulnerabilities (e.g. Buffer Overflows)
  - Security features to enforce stronger security posture (protocol, user and boundaries) are not uniformly implemented

Need to address both NGN and Legacy Network Security
Evolving Wireless Networks & Services

- Besides handset applications there are new applications and services infrastructures emerging
  - Vehicle Telematics
    - On-board computers with multiple wireless interfaces
    - Roadside wireless networks
    - Vehicle to Infrastructure & Vehicle-to-Vehicle communications
  - Smart Grid Energy Management Systems
    - Networks linking entities and devices (e.g., sensors, meters) for generation, distribution and usage
    - Automated smart meter management
Wireless Telematics

**In-Vehicle System**
- In-Vehicle Telematics Architecture
- Applications Software
- Security & Privacy Management

**Multi-Mode Access**
- GPRS
- EVDO
- HSDPA
- DSRC
- WiFi
- WiMAX
- Seamless Mobility
- Secure Mobile IP Sessions
- Integrating Emergency Services / Crash Notification Routing

**Potential Products & Services**
- Telematics Portal
- Vehicle Communications & Network Security
- Telematics Application & Software Development
- Vehicle Diagnostics & Prognostics
- Service Provisioning & Support Systems
- MVNO Content Delivery & Application Hosting
- Transportation Research, Analysis & Modeling

**Telematics Network Infrastructure**
- Vehicle Certificate Authority System
- Web Portal
- Diagnostics & Prognostics
- Misbehaving Vehicle Detection/Removal
- Rating & Customer Profile Systems
- MVNO Content Delivery & Service Hosting
- Network Interconnection
Smart Grid – What is It

- Transform existing energy services using communications technology
  - Remote connects/disconnects
  - Distribution automation
  - Customized user services & billing

Components

- Business applications – e.g., generation/supply, SCADA, Usage/demand
- Computing/IT – e.g., Servers, Web technology, Smart agents
- Communications Infrastructure – e.g., Home Access Network, WIMAX, Cellular
- Energy Infrastructure – e.g., Smart Meters, Transformers
Threat Trending

New Targets: Smart phones, STBs, WiFi, Meters, OBEs, etc.
Technical Trends

- Web-based applications & services
- Mobility with different roaming patterns
- New types of intelligent devices
- Signaling extended out to user
- Multi-media protocols
- Third-party software & user interfaces
- Hardware and software security components

What is Sufficient Security?
Security Testing Evolution

Pen Testing is not sufficient

- Trend towards embedding security functionality into software and hardware with an increasing threat in software/hardware hacking tools

 Verify proper operation through a wide array of vulnerability analysis tools and techniques
Embedded Hardware Security Perspective

- Reverse engineering circuit board hardware and firmware
- Exploiting on-chip debugging, JTAG, and in-circuit emulator capabilities
- Accessing and reprogramming FLASH, RAM, and other storage devices
- Stepping, tracing and altering program execution
- Monitoring and inserting data on system and peripheral interfaces
- Extracting / altering keying material, unit identity and other credentials
- Testing PKI functions, such as firmware signatures
- Modifying the circuit hardware to add new devices, remove existing devices, and create new external interfaces
- Re-configuring hardware to masquerade as a different system element
Operational Trends

- Primary & Backup NOCs
  - Foreign based NOCs
- Outsourced staff
  - NOC staff
  - Software development
- Lifecycle security across multiple suppliers
  - Supply chain risk management
- Supplier maintaining equipment
- Physical co-location

What is Sufficient Security?
Supplier Assurance

Need for Visible Risk Mitigation Activities

- Address the insertion of foreign made COTS into networks by feasible architectures, operations, testing & procurement processes
Current Approaches to Address Challenges

They all have Problems

- Secure Remote Access
- Token-based Access
- Personnel Vetting
- Network Partitioning
- Software & Hardware Testing & Analysis
- Trusted Source Software Releases
- Network Traffic Monitoring
- Filtering Inbound and Outbound Traffic
- Site Inspections
- Physical security assessments
Risk Management Framework

Structured Analysis

- **Network/Service Access Security**
  - User and Device Authentication
  - Personnel & Physical Access Profiles
- **User Platform Security**
  - Hardware/Software Security
  - Management and Services Interfaces
- **Application Security**
  - Service logic integrity and interfaces
  - Information Protection End-to-End
- **Core Network Security**
  - Intra and Inter-Network Security
  - Communications among systems & entities
  - Operational security roles and policy considerations
Holistic Life Cycle-based Security Approach

Broader than IT and Truly End-to-End

- User & Network Authentication
- Integrity & Confidentiality of Signaling and Media
- AAA Architecture
- Management Infrastructure
- Traffic Separation
- Protocol Weaknesses (e.g. SIP)
- Network Resilience
- Maturity/Immaturity of Standards

- Service-Level Security
- Platform Weaknesses & Equipment Shortcomings
- Web Application Vulnerabilities
- Security Policy Enforcement
- 3rd Party Application Interface Vulnerabilities
- Information sharing
- Service Disruption/DoS
- Non-Traditional Vendors
- Software Integrity

- Monitoring for Security, Service Assurance, QoS
- Component Configuration Management
- Vulnerability & Patch Management
- Intrusion Detection & Response
- Maintenance Access
- Physical Security
- Authentication Key Management
