Project Manager
Maneuver Ammunition Systems

Munitions Executive Summit

DPM MAS
William Sanville
New Administration Thrusts

- Push to achieve greater competition
  - Less Sole Source contracts
  - NTIB restrictions still OK
  - Opportunities for new sources
  - With more competition – Good proposals will be key

- Aggressive auditing by DCAA
  - Auditors are no longer accepting issues as they have in the past
  - Auditing is taking far longer than in the past
  - IB: Needs to listen carefully to the DCAA and pay more attention to detail

- Risks PM’s will be facing:
  - New Sources
  - Changes in contract types
  - Unlimited or Government Purpose Rights
What’s Next

**Ammunition Inventories Replenished**
- Stockpiles full and in some cases more than full leading to reduced buys in FY12-17
- In general look for smaller buys
  - Exceptions: High Priority Items like 30mm M789 & 40mm M430A1
- Some buys will be made to protect the IB but the IB must change to reflect the new warfighting reality.
  - The Cold War IB is morphing to reflect today's realities.
  - Continuous to Batch Processing
- Significant improvements in effectiveness, reliability, etc can be reason to build additional rounds. Opportunities exist for improved munitions to fill a new War Reserve requirement
Older Requirements

- Old Requirements
  - 20-85 Years old and some cases non-existent
  - Leads to inefficiency and in some cases inability to meet mission requirements

- Current requirements don’t always require defeat of modern well equipped forces
  - No modern body armor defeat requirement
  - Current requirements don’t take advantage of current technologies
    - Lightweight cases

- PIPS vice new start R&D programs
