Acquisition Environment, Safety, and Occupational Health (ESOH) Lessons Learned from DoD Acquisition Systems Engineering Program Support Reviews (PSRs)

DoD Systems Engineering (SE) Forum

October 28, 2010

Mr. William Thacker for the Office of the Deputy Under Secretary of Defense (Installations & Environment)
Overview

- Purpose of presentation
- Background - The Policy
- Traditional Oversight
  - PSR policy
  - Notional PSR
  - Example Finding
- Acquisition ESOH Observations
- Path Forward
Purpose

This briefing provides an overview of the current efforts by the ODUSD(I&E) through the DoD Acquisition Environment, Safety, and Occupational Health (ESOH) Integrated Product Team (IPT) to:

- Participate in Program Support Reviews (PSRs)
  - Gauge policy compliance
  - Assess policy effectiveness
  - Provide Immediate guidance (improvements) to Programs, as needed
Acquisition ESOH Policy Vision

- As part of sustaining its mission DoD is committed to avoiding:
  - loss of life or serious injury to personnel
  - damage to facilities or equipment
  - harm to the environment and the surrounding community
  - failure with adverse impact on mission capability, mission operability, or public opinion

- To accomplish this in systems acquisition we must use the System Safety methodology across ESOH disciplines to identify hazards and mitigate risks through the systems engineering process

  - ESOH refers to all individual, but interrelated, disciplines that encompass environment, safety, and occupational health

**Policy (DoDI 5000.02, E12.6)**

- **Use MIL-STD-882D, DOD Standard Practice for System Safety,** in all developmental and sustaining engineering activities
- The PM must **report** the status of all High and Serious ESOH risks and applicable ESOH Technology Requirements for **program reviews and fielding decisions**
- **Prior to exposing** people, equipment, or the environment to a known system-related ESOH hazards,
  - Risks must be accepted by the appropriate authority
  - User concurrence for High and Serious risks.
Policy Memo: Minimizing the Use of Hexavalent Chromium

...the Program Executive Office (PEO) or equivalent level, in coordination with the Military Department’s Corrosion Control and Prevention Executive (CCPE), to certify there is no acceptable alternative to the use of Cr6+ on a new system.
Programmatic Environment, Safety, and Occupational Health Evaluation (PESHE)

- Only required at Milestones B & C and for Full Rate Production Decision

Acquisition Strategy

- Summary of the PESHE is required

Weaknesses:

- Limited effectiveness verification
- Limited ability to impact early decisions in the Systems Engineering (SE) process.
PSRs Participation Provides Insight to Policy Implementation

- Validate program compliance
  - Determine accuracy of PESHE and fill in unknowns

- Assess effectiveness of Acquisition ESOH policy and re-enforce reporting of High and Serious category ESOH risks and the status of compliance with ESOH technology requirements at program reviews.
  - DDR&E prefers this approach

- Work closely with program teams to provide ESOH guidance and direction
  - Educates the work force
  - Establishes an “ESOH network”
A Continuous Improvement Approach

Acquisition ESOH Policy

Program Support Review

Analyze PSR Findings & Assist Program (if needed)

Interpretation & Execution By Program Offices

Analyze Findings from PSR

Interpretation & Execution By Program Offices
Program Support Reviews

- ODDR&E leads Program Support Reviews (PSRs)
  - Friendly audit of Program against OSD Policy
  - Examines multiple aspects of Program

- ODUSD(I&E) is providing ESOH Subject Matter Experts and coordinating with DDR&E
  - ODUSD(I&E) leads ESOH SME team
  - Services provide Acquisition ESOH Principal’s support to PSRs for which their service is the lead
ESOH in PSRs Guidance Documents

Defense Acquisition Guidebook (DAG)

Defense Acquisition Program Support (DAPS)

Methodology (Guide)

- Section 4.0, Technical Processes
  - Sub-Area 4.1, Design Considerations
    - Factor 4.1.4, ESOH
    - Factor 4.1.7, Corrosion (Hexavalent Chromium)
Review Areas of PSRs

DAPS Methodology

1. Mission Capabilities – Clarity and stability of CONOPS, mission requirements, and implication for system requirements / constraints, program structure and execution.

2. Resources – Budget sufficiency and phasing, staffing, system schedule, and assets available to meet program objectives.

3. Management – Acquisition strategy and planning, criteria, contracting, risk, tools, and techniques used to manage the program.

4. Technical Processes – Design considerations, requirements development, technical baselines, engineering tools, software, design verification, and producibility and supportability planning for product development.

5. Performance – Effectiveness and Suitability maturity and adequacy of product(s) and services being acquired (includes hardware, software, production considerations and logistics support).

6. Special Interest Areas – Request For Proposal, etc.
Top-Level Program Risks (PSR team)

**Risk:** Cost Increase
**Drivers:**
- Resource Management Decision (RMD) 802 quantity reduction (C)
- Unknown sustainment strategy (C)
- Business Case Analysis (BCA) timeline impact to POM-XY (C)

**Recommendations:**
- MS budget for highest-cost sustainment alternative, expedite BCA analysis

**Risk:** Initial Operational Capability Schedule
**Drivers:**
- Early use of schedule reserve (S)
- Recent training delays (S)
- Limited Production Qualification Testing (PQT) assets (S)

**Recommendations:**
- Program office perform schedule risk assessment

**Risk:** Program Manning
**Drivers:**
- MS authorization for staffing has not been approved by System Center (S, P)
- NA-1 Aircraft Product Directorate personnel turnover / vacancies (S)
- Competition for qualified personnel (S)

**Recommendations:**
- MS develop high-priority mitigation plan for Manning and staffing

**Risk:** Initial assessment: Jan 2009
**Current assessment:** Feb 2010

- Recommendation shows progress and / or completion

**Risk:** Transition Planning
**Drivers:**
- Transition Support Plan lacks details for adoption of MS processes and procedures
- Potential Concept of Employment (CONEMP) differences (C, S)

**Recommendations:**
- MS get PCO on-board, conduct detailed review of contract, identify / implement changes
- Program identify process differences and planning gaps in Transition Support Plan

**Risk:** Sustainment Planning
**Drivers:**
- Inadequate sustainment planning at program inception, RMD 802 forces re-evaluation (C,S)
  - BCA late-to-need for supportability decision
  - No visibility into repairs and FRACAS for components below line-replaceable-unit level
- Insufficient plan for design sustainment (C,P)
  - Lack of defined block-upgrade strategy
  - ESOH, PESHE and Corrosion plans are incomplete

**Recommendations:**
- Program update technical documentation: SEP, AS, MOSA, PESHE, etc.
- MS define block-upgrade strategy
- MS monitor logistics data / spares, consider adding materiel availability ($A_m$) goal
Taxonomy of Classifications

Note: When recording multiple negatives in a PSR report, ensure that each negative has clear linkage with its risk or issue, recommendation, root cause, and impact.
**Program Support Review Definitions**

**Finding.** An inquiry by the program support review team into a DAPS methodology area, sub-area, or factor. Findings can be either **known** or **unknown** by the PMO and characterized as…

+ **Positive.** Programmatic or technical effort that is above normal or expected effort, and which could lead to a strength and/or an institutionalized best practice.

○ **Neutral.** Normal programmatic or technical effort. May be a candidate for process improvement.

− **Negative.** Programmatic or technical effort that is *lacking positive properties or may introduce variation*. (Generally stated in a broad manner, similar in nature to the statements of positive and neutral findings.) Consequent current or potential future problems are identified as issues or risks, with at least one issue or risk being identified for a negative finding. Multiple issues or risks may be associated with a negative finding.

  − **Issue.** Current problem that should be resourced and resolved.

  ~ **Risk.** A future uncertainty relating to achieving program technical performance goals within defined cost and schedule constraints. Risks are associated with negative findings or may be associated with issues.
Systemic Analysis:

- **Root Cause.** Analysis to determine the underlying reason for the negative finding and associated issue or risk. The root cause can be developed using 5 “whys” and should focus on addressing the problem and not the symptom. Three tiers of root cause characterizations are required:
  - **Tier 1: Root Cause**
    - Textual description aligns with DAPS; documented by PSR team
    - Perceived program root cause
  - **Tier 2: Systemic Root Cause**
    - Short descriptor (from pre-defined list); assigned by PSR team
    - Something within DoD scope to solve. Can be “Acquisition” or “acquisition”
  - **Tier 3: Core Root Cause**
    - Short descriptor (from pre-defined list); assigned by PSR team
    - Something outside the Department. Bigger than “Acquisition”

- **First Order Impact.** The programmatic or technical effect of issue(s) and/or risk(s). Viewed from the “first order” prior to performance, cost, or schedule changes.

- **Recommendation.** Advice or additional insight on how to resolve negative finding(s), and the associated issue(s), or mitigate risk(s).

</table>
4.1 Design Consideration
4.1.4.2 ESOH

- **Findings**
  - Current Programmatic Environment, Safety, and Occupational Health (ESOH) Evaluation (PESHE) document and the Federal Aviation Administration (FAA) Airworthiness Certification process do not fully address the unique safety issues of Military Operations of the NA-1
    - The PESHE states once the FAA approves the NA-1, the aircraft will be safe for humans, but this does not fully cover ESOH risks. Additionally, an FAA airworthiness certification does not preclude the requirement to conduct ESOH analyses necessary to identify hazards and associated risks using MIL-STD-882D methodology.
    - Potential for NA-1 Program Office (PO) to improperly identify and manage ESOH risks with potential result of exposing personnel, equipment, and the environment to unknown hazards.
    - The PESHE does not address the risk of continued reliance on Halon fire suppression systems.
    - Potential changes in FAA certification requirements or military operational risks may drive changes in the fire suppression systems.

- **Systemic Analysis**
  - Root Cause Details: Lack of substantiated ESOH hazard / risk data in the PESHE.
  - Systemic Root Cause: 5. Management
  - Core Root Cause: 10. Business Practices

- **First Order Impact**
  - Ineffective ESOH risk management resulting in the potential for exposing personnel, equipment, and the environment to unidentified hazards with potential cost and / or schedule implications.

- **Recommendation**
  - Program office revise the PESHE to address findings above.
**PSR Participation**

- Small Diameter Bomb II
- HC/MC-130
- C-27 Joint Cargo Aircraft (JCA)
- Joint Air Ground Missile (JAGM)
- Joint Air-to-Surface Standoff Missile Extended Range (JASSM-ER)
- F-35 Joint Strike Fighter (JSF)
- Global Hawk
- MQ-9 Reaper
- Mobile Landing Platform (MLP)
Common PSR ESOH Observations (Findings/Issues)

- ESOH risk data and technology requirements not in PESHE
- PESHE does not describe actual ESOH program implementation
- Program Office ‘System Safety’ and ‘ESOH’ efforts not integrated
- Lack of emphasis on implementing ESOH mitigations
- Failure to address USD (AT&L) hexavalent chrome policy
Path Forward

- Continue to provide ESOH Subject matter experts to participate on PSRs

- Provide support to ESOH Practitioners supporting Programs

- Make improvements targeted at root cause(s) to address repetitive findings
  
  ⇒ Policy or Guidance? Share Findings/Issues with DoD Acquisition IPT members
  
  ⇒ PESHE content improvements and/or PESHE timing …
  
  ⇒ Roles and responsibilities …

- Training (i.e., CLE-009 update, etc.)
Questions?
