Change is Good!
...and other mantras to live by.

Making process improvement work for you!

Coleen Crouch
Chief, Quality Management
Central Technical Support Facility
Fort Hood, TX
Why does CPI fail?

- “Lean Six Sigma may work in manufacturing, but we’re a ______ (fill in the blank) industry!”
- “Who are THEY to tell me how to do my job?”
- “I’m too busy working to attend those meetings.”

- “My manager doesn’t know how we REALLY do things around here, so there’s no way his/her ideas are going to help!”
- “We’ve been doing it this way for YEARS!”
- “If it ain’t broke, don’t fix it!”
Making process improvement work for you

- Do not pass GO, Do not collect $200 until you have COMMITTED Management Support!
- Eney, meany, miney, moe! Select team members carefully!
- Maybe nothing can stop a Trane, but changes won’t go until you TRAIN!
- Metrics – They aren’t just for Europeans anymore!
- Rinse and Repeat
Management Support

Why?
- Resource Allocation: manpower, meeting space, money
- Authority
- Recognition

How?
- Appeal to the bottom line
- Brief briefs (and a LOT of ‘em)
- Don’t start your second string players in the tournament game
- Authority to decide
- Group dynamics & balance of power
- Attitude about change
- Build in extra time to make sure everyone speaks the same language.
- Teach the tools to be used ahead of time.
- Do not exclude management in training opportunities.
- Start and end points determine success
- Plan extra time if you lack complete documentation

Metrics
- Easiest step to skip = first point of failure
- Requires more discipline than other steps

Follow up
Making process improvement work for you

- Committed management support
- Select team members carefully
- Train
- Metrics
- Follow up
If you’ve got a question, I’ve got a story about something I’ve tried and failed! Maybe you can learn from one of my experiences too.
