Future Chemical/Biological Ensemble Ground Soldier System (FCBE-GSS) Technology Demonstration

2011 CBRN Survivability Conference

Andra Kirsteins
FCBE-GSS Technology Manager
Natick Soldier Research, Development & Engineering Center, Natick, MA
17 May 2011
Background & Objectives
System(s) overviews
Technical & User Demonstration
Results Overview
Summary
Collaborative effort between:

- **NSRDEC** - Natick Soldier Research Development and Engineering Center
- **PEO-Soldier** - Program Executive Office Soldier
- **JPEO-CBD** - Joint Program Executive Office for Chemical & Biological Defense (JPM-P, JPM-IS)

- **MOA signed 25 Mar 08**

- **Technology Transition Agreement** in place with Joint Project Managers for Protection (JPM-P), and Information Systems (JPM-IS) and Program Executive Office- Soldier (PEO-Soldier)

- **Multi-agency partnership** (includes ECBC, ARIEM, ATC, AEC, SPAWAR-Pacific, industry)
Systems Integration

Demonstrate integration of CB individual protection technologies into a "Warfighter System" using GSS (Nett Warrior) as the demonstration platform

**Integrate CB Protection into the helmet**
- Leverage technologies from JSTO-CBD funded programs; Heads-up ATO (NSRDEC) and industry

**Integrate CB protection into "duty uniform like" ensemble:**
- Achieve equivalent thermal performance to the Flame Resistant Combat Uniform (FR-ACU) and determine best achievable CB performance (*Identify Trade-offs*)
- Integrate materials from industry and JSTO-CBD S&T Programs (Integrated Protective Fabric System)

**Integrate CB sensors and warning and reporting system with the Future GSS Network (Nett Warrior)**
- Improve Situational Awareness

**Integrates and compatible with Combat Gear**
- Load carriage; body armor; communications; electronic equipment; future Nett Warrior network
Demonstration Objectives

- Integrate CB protection into a duty uniform design
- Reduce thermal burden
- Integrate respiratory/ocular protection into the helmet using revolutionary designs
- Demonstrate and assess novel CB sensing capabilities in relevant operational scenarios, including network information sharing.
- Engage Industry for technologies, concepts and fabrication
- Demonstrate in an Operationally Relevant Environment
- Transition technologies and findings to JPM -P (CBRN Uniform Integrated Protective Ensemble (UIPE) Program); JPM -IS; PEO -Soldier and S&T programs (DTRA & NSRDEC)

Different Needs – Time Driven

**Immediate Need**
- Quick donning capability
- Enough protection to exfil from threat

**Notional Scenario:**
- Infantry unit encounters a Chemical IED

**Primary Focus of Tech Demo**
- Time, weight, size are not priority issues
- Enough protection to exfil from threat

**Long Duration**
- Quick donning capability
- Long duration protection

**Notional Scenario:**
- House clearing operation encounters a clandestine chemical lab

**Deliberate Need**
- Chemical reconnaissance team gathers samples

**Notional Scenario:**
- Deliberate Decontamination of personnel or equipment

**Time, weight, size are not priority issues**
- Enough protection to exfil from threat

**Long duration protection**
Systems Engineering Process & Timeline

- **Needs Analysis**
  - Jun-Dec 08
  - User Survey 266 soldiers
    - Supply & Logistics;
      - Infantry; and Chemical
  - Survey future/existing Requirements

- **Develop Concepts**
  - Oct 08-Jan 09
  - User Focus Groups
    - (Jan 09)
      - FLW, MANSCEN
      - CBRN Marines (1 MARDIV)

- **Phase I Design**
  - Feb 09 - Jun 10
  - User Focus Groups:
    - Phase I Design (Ft Benning Aug 09 & Ft Lewis Sep 09)
    - Phase II Design (Jan/Feb 10)
  - Design Review 1
    - (May 09)
  - Design Review 2
    - (Nov 09)
  - Design Review 3
    - (Apr 10)
  - Concept Selection
    - (Feb 09)

- **Phase 2 Design**
  - July-Oct 10
  - OTM 09 C4ISR
  - Design Review 3
    - (Apr 10)

- **Phase 3 Design**
  - OTM 10 C4ISR

- **Technical & User Demo**
  - July-Oct 10

- **Transition in FY11**

- **Component & System Engineering Tests**
- **Compatibility**
- **Human Factors/ Human Systems Integration**

- **User input / feedback on system needs, concepts & designs in all phases**
# Government Led Concepts

## 4 Ensemble Designs
- Industry materials (CBCU & CBUG)
- IPFS Materials (CBCU-IPFS)
- NSRDEC laminate (E-FRACU over CBUG)
- Industry boots & gloves

## 2 CB Head-Gear Integrated Designs
- CB RAM (low profile & duration)
- CB PRISM

## CB & GSS Sensor & Network Integration
- JCAD
- JOAC
- JWARN and GSS

---

## Industry

### Industry Materials
- Request for Information
- Approximately 41 materials evaluated
- Materials used in gov’t concepts

### 4 Ensembles Requisitioned
- Manufacturer off-the-shelf design concepts

### Integrated Ensemble Concept Design
- Contract awarded to develop CB Integrated Combat Uniform Concept Ensemble that is optimized for thermal performance

### CB Integrated head-gear Solution
- Contract awarded to explore ground variant concept of the MACH.
- Focuses on exploring split mask concept for CB integrated head-gear
Chemical/Biological Combat Uniform (CBCU)

**Design**
- Low thermal burden CB protective combat uniform
- Multiple venting strategies
- Tortuous path waist interface
- Cowl neck integration design
- Worn with the CB PRISM Head Gear

**Materials**
- Torso: 10.6 oz/sqyd Activated Carbon Stretch material
- Sleeve/Trouser: Woven, nylon/cotton outer-shell laminated to activated carbon layer- 10.3 oz/sqyd
**Design**
- Low thermal burden CB Combat Uniform
- Multiple venting strategies
- Cowl Neck Integration Design

**Materials**
- Integrates Materials from IPFS S&T Program (DTRA/NSRDEC)
  - CWA Protection (barrier, sorptive and reactive material technologies)
  - Top surface antimicrobial treatments (kills spores, bacteria, fungi, viruses)
  - Integrated aerosol filter material
- Torso: Tri-Laminate Stretch Material (Newsorb)
- Sleeve/Trouser:
  - Shell- CleanShell Finished Para-aramid textile
  - Inner Layer-Thin membrane (PVAM) &activated carbon laminate material
**Design**

- Integrated Head Gear System Leveraging a HeadsUp-ATO helmet design
- Don mask without removing helmet
- Full-time filter – No hot swap capability
- Twin-filter design integrated into the helmet liner
- Split axial flow filter design, to maximize surface area.

**Materials**

- Filter : Impregnated, activated carbon in a flexible webbing and electret particulate media
- Activated Carbon Stretch material used in cheek
**Chemical/Biological Undergarment (CBUG)**

**Design**
- Low thermal burden undergarment design
- Worn under the duty uniform
- Worn with the CB RAM and CB balaclava
- Concealable protective system
- Deliberate donning scenarios

**Materials**
- 10.6 oz/sq2 Activated Carbon Stretch material
Design
- FRACU design with closures modified for CB protection
- Worn over the CBUG
- Layered System for additional CB protection
- Worn with the CB RAM and CB balaclava

Materials
- Outer Layer: Flame Retardant Nonwoven Material (60/40 FR Rayon, Para-aramid)
- Inner Layer: 6.0 oz/sqyd carbon stretch material
- Composite weight: 9.2 oz/sqyd
**Design**

- Integrated face piece system with HeadsUp-ATO helmet design
- Don mask without removing helmet via helmet rails
- Escape mask or riot control type use
- Filters embedded in mask result in low profile
- Split axial flow filter design with lower surface area than PRISM

**Materials**

- Filter: Impregnated, activated carbon in a flexible webbing and electret particulate
Baseline ensembles/components include in **all** testing.

**Demonstrate Objectives**

**Technical**
- System
- Component

**User**

**Operationally Relevant Environment**
- Individual and Collective Tasks
- Full systems, including combat gear
- 13 Infantry and Chemical MOS Soldier participants

PAO# U11-260
User Demonstration
Main Events

Individual Task Performance

➢ Road March
➢ Portability Course
➢ MOUT
➢ Grenade Throw
➢ Automatic Weapon Firing (blanks & simulator)
➢ Cognitive Activities (Pre and Post-exertion)
➢ Timed Donning
➢ Range of Motion
➢ Vehicle Operations
Scenarios provide a variety of doctrinally sound venues in which participant soldiers evaluate the performance of technologies and capabilities in an operationally relevant environment

- **Conduct Presence Patrol** (performed by Rifle Squad/ Fire Team based on threat and area)
- **Conduct a Cordon and Search** - conducted at Company level, based on threat and area.
- **Sensitive Site Assessment (SSA)** - Performed by SSA Team and supported by Combat Units to provide area isolation and security
### % Improvement in Warfighter Predicted Endurance Time (Thermal) compared to CB Baseline Ensemble

All Testing Performed with Full Combat Load
FCBE-GSS Ensembles
Thermal Performance

Predicted Core Temperature for Moderate Work in Full Sun

Temperature = 22.5°C, RH = 40%, WorkRate = 447.5W

- Endurance time to 39°C for JSLIST
- 25% improvement

CBCU PRISM = 189% improvement

CB PRISM Integrated Filter Concept

• Advantages:
  • Filter removed from front of face
  • High surface area available for filtration and lower breathing resistance
  • Integration- mask, head gear and components
  • Improved Mask/helmet stabilization
  • Don mask without removing helmet
  • Cowl neck, to integrate helmet/mask and garment, provides for better thermal comfort especially in non-CB mode where it is rolled up in a stowed configuration. Overall good user acceptability of cowl in terms of comfort

• Disadvantages
  • Potential/unknown impacts to helmet performance
  • Filters cannot be changed during missions
  • Larger helmet surface area introduces interference issues
  • Filter ducting system may introduce leakages
  • Sound localization & weapons compatibility reduced
CB Integrated Head-Gear General Findings

CB RAM- Helmet attached filter concept for lower challenge & duration scenarios

Advantages
- Lower profile minimizes interface with weapons and sighting systems
- Reduced bulk - Lower weight
- Integration- mask, head gear and components
- Improved Mask/helmet stabilization
- Don mask without removing helmet (if balaclava already worn)
- CB RAM concept favored by users
- MIST data suggests balaclava offers good protection

Disadvantages
- Filter will require to grow from CB RAM design to even meet lower challenge level and duration scenarios. Significant improvements to sorbent media technologies required.
- Embedded filter not replaceable
- Requires wearing balaclava under helmet
- Balaclava requires helmet removal to don mask and reduces thermal comfort
User Demo Findings - Example

**Soldiers rating of:**
Overall Ability (of Soldiers) to accomplish Mission Critical tasks and movements effectively

**Increasing Performance**

**Mission Performance - Closed**

UNCLASSIFIED
Increase Situational Awareness for the Warfighter
- Demonstrate ability to integrate sensors and networks (JWARN/Future Nett Warrior)
- Assess potential benefits of capability
Demonstrated sensor and network integration with the S&T version of the Nett Warrior Platform (Soldier Domain Technologies (SDT))

- Joint Chemical Agent Detector (JCAD) integrated onto the Ground Soldier platform via Common CBRN Sensor Interface (CCSI) protocol and using the JCID on a Chip Software version
- SDT and JWARN Networks integrated
- Automated sensor information sent as NBC messages to and from the Soldier
- Real time CBRN Situational Awareness information displayed on the Soldier Map

Future Goal: integrate wearable sensors on/in the uniform

* JCAD is not designed to be a wearable sensor but was used to demonstrate sensor & network integration and assess improvements to situational awareness
CB Network
Preliminary Data

Soldier Display during MOUT Operations

Increased CBRN Situational Awareness for the Warfighter

Soldier Display

Soldier Receives NBC Warning Message

Soldier Receives Initial Hazard Prediction

JWARN used to calculate the initial hazard prediction where the information is sent to the Soldier Display.

Information flow between JWARN and the on-Soldier Display with relevant CBRN Information.
Integration of CB protection into "duty-uniform like" concepts feasible

Reductions in thermal burden achievable through optimization of designs and materials

- Use of strategically placed vents aid in reducing thermal burden of protective garments in reduced protective posture but necessitates improved closure designs

Total combat load reductions demonstrated between 4.4-8 lbs (compared to current baseline CB ensemble)

Integration of helmet and mask feasible

Conformal filter technology allows for novel approaches to CB integrated head-gear design

Improvements to situation awareness possible through CBRN sensor and warning integration with on-Soldier communications - Machine to Machine communications feasible and could reduce NBC message transmission times

Formal transition to JPM-P for UIPE Increment I, JPM-IS and PEO Soldier planned for 3Q 2011
