Army Agile Process – Briefly

To shape the Development, Integration, Test and Certification of the Network for Success:

- Common understanding of desired capabilities, limitations and system requirements
  - Enables ability to know how to test; cost of test (dollars and risk); and creates early dialogue between stakeholders

- Common set of “core” vignettes based on “in-the-dirt” testing
  - Facilitates Model-Test-Model approach, and understanding of “baseline” conditions under which system must perform

- Common set of “core” measures
  - Allows for reuse of data, promotes similarities in findings and results, and improvements to processes

- Data Model
  - Ensures reuse of data, clear understanding of measures and data elements to be collected, and analytic consistency between test events and capability sets
