Distribution Statement A:

Approved for Public Release, Distribution Unlimited.

Some Definitions

- STAR = Scalable Technology for Adaptive Response
 - “Provide capability for scalable, selectable, and adaptive lethal effects against platforms and personnel while limiting collateral damage.”
- ATO = Army Technology Objective
 - STAR demonstration in 250 mm (GMLRS), 105 mm, and 30 mm systems
- This talk only covers ESAD for 105 mm projectile version

Electronics Development Corporation

NDIA Fuze Conference, May 15, 2012
Distribution Statement A: Approved for Public
Release, Distribution Unlimited

105 mm STAR ESAD Topics

- Outline requirements
- 105 mm STAR system-level design
- ESAD system design concept
- Logical, electrical, and mechanical interfaces
- ESAD packaging concept

Electronics Development Corporation

NDIA Fuze Conference, May 15, 2012
Distribution Statement A: Approved for Public
Release, Distribution Unlimited

Outline ESAD Requirements

- MIL-STD-1316E and FESWG Guidelines
- Arming: Setback and spin
 - Passive setback switch
 - Mechanical spin switches
- Compatible with direct set using EPIAFS
- Pre-launch power available from setter
- Super-cap power available through launch to retain pre-launch switch states

Electronics Development Corporation

NDIA Fuze Conference, May 15, 2012
Distribution Statement A: Approved for Public
Release, Distribution Unlimited

Outline Requirements, Continued

- Selectable firing modes
 - Prox, impact or delay
 - Selectable delay after impact
- Selectable fore and aft firing points
 - Fore, aft, or both
 - Selectable delay between aft and fore
- Compatible with multiple warhead configurations
 - Complex “keep-out” restrictions
 - Drive circuitry and connector for clocked rings motor

Electronics Development Corporation

NDIA Fuze Conference, May 15, 2012
Distribution Statement A: Approved for Public
Release, Distribution Unlimited

STAR 105 mm Projectile

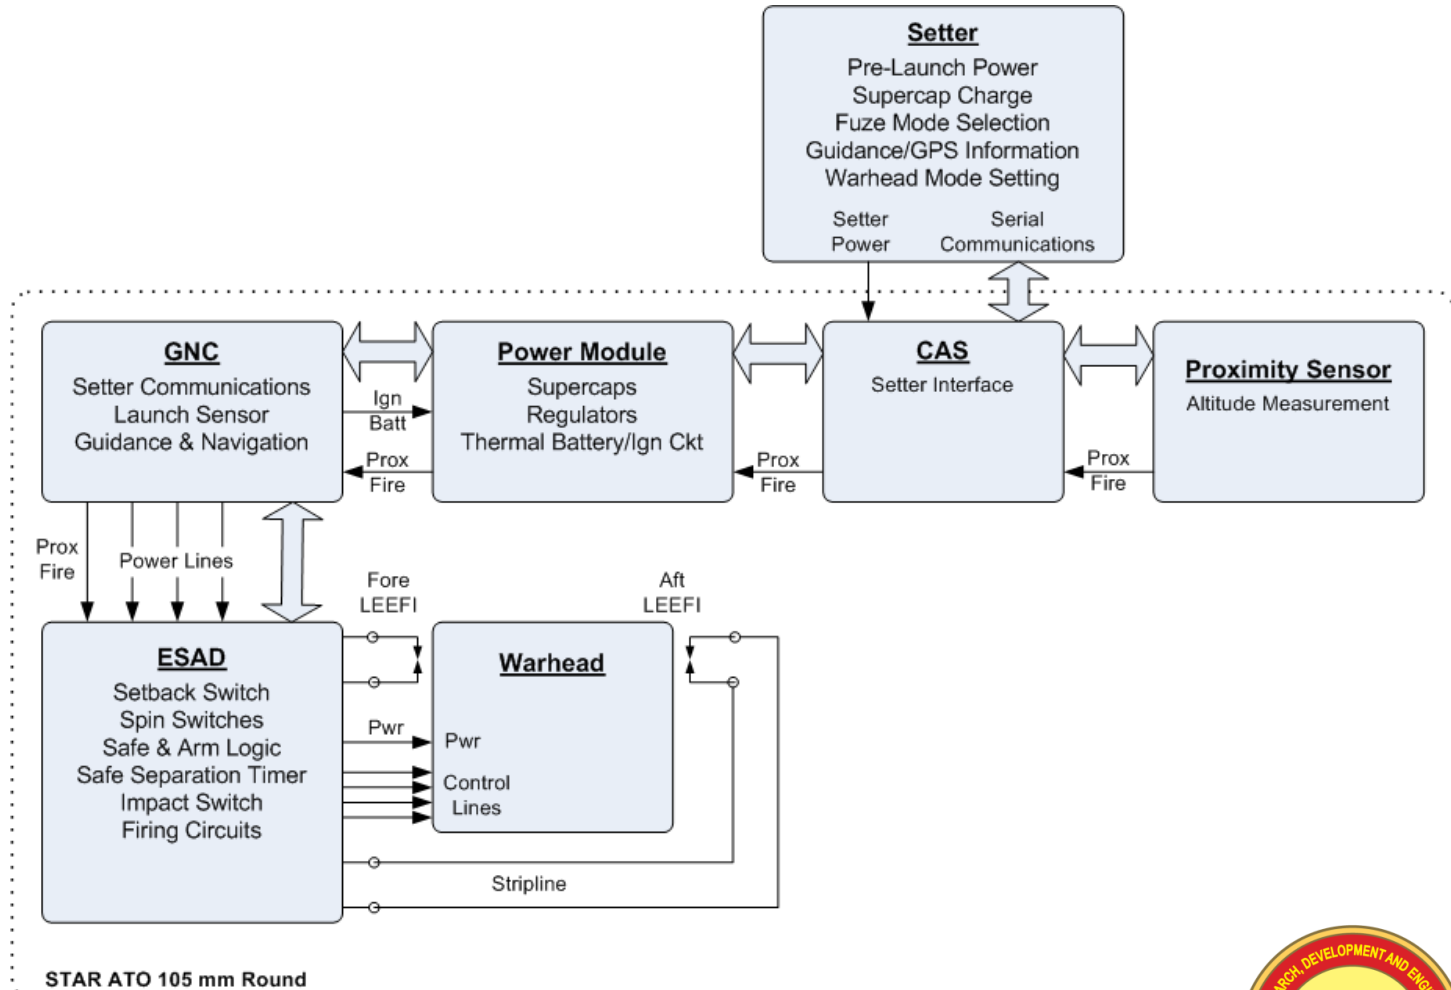

Electronics Development Corporation

 Release, Distribution Unlimited

Arming Logic Partitioning

- Complex logic device:
 - Anti-fuse FPGA (Actel eX128)
 - Monitors setback and spin switches
 - Retains BIT and pre-launch switch states (volatile RAM)
 - Sequence and arming delay timer
 - Generates dynamic arming signal
 - Cannot arm the ESAD by itself
- Discrete circuitry:
 - Detects closure of passive setback switch(s)
 - Independent arming delay timer
 - Necessary for arming

Electronics Development Corporation

NDIA Fuze Conference, May 15, 2012
Distribution Statement A: Approved for Public
Release, Distribution Unlimited

ESAD Microcontroller

- Microchip PIC16-series
 - Flash memory
 - Very low power (runs through delay after impact on capacitors)
- No direct safety functions
 - Mission data, mode, and TM communications
 - Tells FPGA which channel(s) to charge (fore, aft, both)
 - Passes arm enable from GNC to FPGA
- Generates fire signals at appropriate time
 - Receives fire signal from prox sensor
 - Monitors impact switch
 - Generates delay after impact if that mode is selected
 - Generates delay between channels if that mode is selected

Electronics Development Corporation

NDIA Fuze Conference, May 15, 2012
Distribution Statement A: Approved for Public
Release, Distribution Unlimited

Passive Setback Switch

- Passive = no power during launch
- Pre-launch switch status verified and remembered
- Arming power passes through setback switch
- Redundant switches for risk mitigation
 - Cylindrical zigzag switch
 - Planar zigzag switch

Electronics Development Corporation

NDIA Fuze Conference, May 15, 2012
Distribution Statement A: Approved for Public
Release, Distribution Unlimited

Cylindrical Setback Switch

- Simple spring-mass system
- Multi-stage zigzag (drop safe)
- Pre-biased
- Resettable
- Built by L-3 FOS

LS-DYNA user input
Time = 0

Electronics Development Corporation

NDIA Fuze Conference, May 15, 2012
Distribution Statement A: Approved for Public
Release, Distribution Unlimited

Planar Setback Switch

- Simple spring-mass system
- Multi-stage zigzag (drop safe)
- Solder-less contacts
- Pre-biased
- Structural elements all plastic
- Easy assembly
- Resettable
- Built by ARDEC

Pre-biased spring

Front EFI

STAR 105 mm ESAD Status

- Approximately 25 prototypes built
- Laboratory tests for functionality
 - Operation of logic for valid and invalid inputs
 - Operation and characteristics of fire set
 - Programmable delay after impact
 - Programmable delay between channels
 - Proper firing through longest EFI cable
- Field tests
 - Soft catch (SCat) gun for ruggedness
 - 9-shot HE demonstration at YPG December, 2011
