Sample CONOPS

1. Autonomous UGV (or USV for maritime ops) transports DroneHome to forward location.

2. UAS delivers UGV Mobile Sensor Nodes to key LP/OP locations using roundtrips.

3. UGVs move into location and begin automated reporting using onboard ATR software.

4. UGV or USV deploys tethered UAS for comms backhaul.

5. UAS recovers UGVs and returns them to DroneHome station for recharge/retasking.
